

# Providing Quality IT Solutions and Services

## Denologix KPI Dashboard

### Benefits:

- ◆ Complete awareness of most up-to-date critical business measures for your organization
- ◆ Aggregate data from disparate systems into a single view
- ◆ Monitor key metrics at-a-glance via easy to understand charts and reports
- ◆ Timely decisions backed by most current and complete organizational performance data
- ◆ Enable employees at every level of the organization to receive the information that is relevant for their role
- ◆ Communicate common business patterns and relationships: trends, rank, part-to-whole, deviation, correlation.

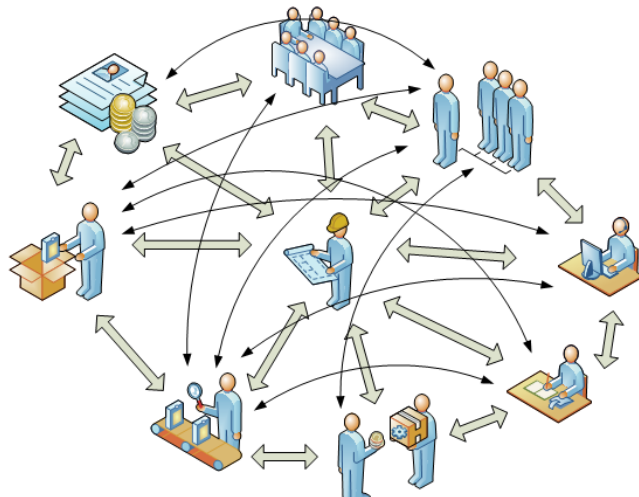

### Features:

- ◆ Aggregate information from operational systems presented in a graphically rich environment
- ◆ Real-time update capability
- ◆ Drag and drop charts and reports to create personalized views
- ◆ Web based secure access from anywhere, anytime
- ◆ Personalized views for each user
- ◆ Pre-built data marts, charts and reports for quick and cost-effective implementations
- ◆ Extendible by business users; no need for custom development
- ◆ Parameter driven for dynamic charting and reporting capability
- ◆ Robust high volume processing capability
- ◆ Text messaging for immediate collaboration of ideas and improve overall understanding
- ◆ Platform independent

It is essential that Key Performance Measurements of your organization are published to decision makers as soon as they are available. In today's corporate world, KPIs provided to management that are in excess of one week old are useless. The key factors that have an impact on an organization's sales and operational cost can change rapidly.

Denologix has developed several out-of-the box dashboards for ease of deployment and quick time-to-market. These dashboards come with their own data marts, charts and reports that are based on industry standards. And, as the business evolves, the dashboard can be readily extended without incurring additional costs.

## How long does it take you today?

## Real-time access to your KPIs
