

Providing Quality IT Solutions and Services

Our team has delivered enterprise IT solutions for major Canadian organizations for over 3 decades.

Over the years, we have realized that no two IT initiatives are ever the same in their entirety. However, they all have components and attributes that are identical. It is the commonality amongst different IT initiatives that serves as the foundation of our company.

We have used our experience and knowledge from previous projects to create out-of-the-box Solutions for common business needs. By pre-packaging the solutions; we have made the investment in research, and absorbed the cost of trial and errors, so you don't have to. This pre-packaging of common business needs provides the economy of scale necessary to save our clients time and money with the peace of mind that comes from Assuring the Quality before making a big commitment.

Our solutions are architected and designed in such a way that they can be implemented out-of-the-box, as phase I in almost all cases. However, they do allow for extending the solution to meet unique requirements for each organization, as subsequent phases of the initiative.

Our Clients

TD, CIBC, Munich, Allstream, Bell Mobility, Rogers, PricewaterhouseCoopers, Innovapost/Purolator, Samsung, Algoma Steel, Fairmont Hotels, LCBD, Exclusive Advertising, Ministry of Health, SSHA
